

DJANGO

ILLUSTRATIVE ONLY / reference: django/django

Purpose and scope. An existing application returns one stored article as HTML. Teaching only; no upstream adoption or tested behavior is asserted.

SPEC / spec-vN FSL first; scope, promises, checks and routes. Appendix, errata or amendments when useful.	CODE / code-vN Delivers the product and its executable checks.
DOCS / docs-vN Explains accepted behavior and supplies examples.	MEMORY / memory-vN Keeps decisions, context and evidence links; never creates law.

SPEC + MEMORY stay fixed. CODE / DOCS is this example's specialization. Squares own artifacts; R-01 crosses only those needed for its outcome.

CONTRACT

MUST / **MUST NOT** bind. **SHOULD** / **SHOULD NOT** guide. **MAY** permits.

LAW-DJANGO-001. Public behavior **MUST** have scoped code evidence and aligned guidance. Check: code and guidance.

GUARD-DJANGO-002. DOCS **MUST NOT** claim behavior unsupported by accepted CODE. Check: review.

CONTRACT-DJANGO-004. Evidence **MUST** distinguish tested behavior from illustration. Check: scoped evidence.

E2E ROUTE

R-01. request → URL → view → model → DB → template → HTML response.

Expected. Known article title in returned HTML; browser and deployment excluded.

Route defines expected coverage; run records observed coverage. Show each point before running; retain PASS, FAIL or NOT RUN and evidence in the log. A partial pass **MUST NOT** be called E2E proof.

Development. Study current behavior, distinguish it from intended promises, adopt a reviewed baseline, then check R-01. Iterations are optional; no reconstruction of the four new-project learning goals is required.

References. Django 5.2 [overview \[D1\]](#) and [testing \[D2\]](#) guide planned checks; no upstream law is adopted.

Lifecycle. Review draft changes directly. Keep released SPEC unchanged. Appendix explains; errata corrects without changing intent; adopted amendments change intent. A proposal is not approval.

Release check. Review the four squares together: SPEC stable; CODE verified; DOCS aligned; MEMORY understandable.

Baseline and evidence. This illustration defines R-01. Implementation baseline, environment, four-commit snapshot and runtime evidence are not supplied. All route points are NOT RUN. Conformance: **NOT YET PROVEN**.

main1 remains the original first commit. Existing-project adoption can begin at a reviewed baseline; matching lanes continue forward. main = accepted integration; project versions do not track template versions.
