

[PROJECT / PRODUCT]

Project repository: [owner/repository] • Owner: [responsible person/team]

PURPOSE [Who this serves, the outcome it promises, and its distinguishing principle.]

BOUNDARY [What this contract includes; what it deliberately does not own.]

FOUR SQUARES

01 SPEC / spec-vN Owns binding intent, scope and contracts. Gate: stable clauses + scoped acceptance criteria.	02 [LANE A] / lane-a-vN Owns the primary implementation or deliverable. Gate: the declared deliverable passes its checks.
03 [LANE B] / lane-b-vN Owns the second durable project concern. Gate: usable, aligned and independently checked.	04 MEMORY / memory-vN Owns recall, decisions, examples and evidence links. Gate: understandable; no new law outside SPEC.

SPEC + MEMORY are fixed; the two middle lanes are project-defined. Branch suffix vN follows the project, not the FSL template version.

BINDING CONTRACT

MUST / **MUST NOT** = binding • **SHOULD** / **SHOULD NOT** = guidance • **MAY** = permission

STABLE CLAUSE ID	REQUIREMENT / PROMISE	VERIFICATION
LAW-[SCOPE]-001	[Subject] MUST [observable requirement].	[Check / evidence path]
CONTRACT-[SCOPE]-002	[Interface] MUST [observable promise].	[Acceptance evidence]
GUARD-[SCOPE]-003	[Operation] MUST NOT [forbidden effect].	[Negative / boundary test]

SPEC governs. Binding requirements **MUST NOT** be silently weakened; missing evidence is **NOT YET PROVEN**.

DEV STRATEGY / INITIAL ITERATION

I-001: tiny [input] → [required touchpoints] → [observable output] → prove → grow.

Parallel E2E / E2M / M2E **MAY** be used. M = named midpoint contract. Partial or component proof is not E2E. No full iteration plan is required.

TECHNOLOGIES, LIBRARIES & REFERENCES

ITEM	INTENT / USE	SOURCE
[Technology / library]	[MUST / SHOULD / MAY] [purpose]	[Canonical link / source ID]
[Existing capability]	[REUSE / INHERIT / REFERENCE]	[Source; pin only if needed]

Only essential choices belong here. A category or link alone creates no obligation; a binding choice needs a SPEC clause ID.

LIFECYCLE / RELEASE CHECK

Draft → Prove → Release → Appendix / Errata / Amendment → Next Release.

[] SPEC stable [] LANE A verified [] LANE B usable and aligned [] MEMORY understandable

Status: **NOT YET PROVEN** | Evidence / exact four-commit snapshot: [project-local path].

main1 = this repository's first commit, fixed. Four lane branches vN → matching lanes vN+1. main = accepted integration after gates.

[PROJECT / PRODUCT]

Project repository: [owner/repository] • Owner: [responsible person/team]

CONTRACTS & IMPLEMENTATION NOTES

Use this page only when essential detail will not fit on Page 1. Delete unused sections.

INTERFACES & OBSERVABLE OUTCOMES

CLAUSE	BOUNDARY / INTERFACE	OBSERVABLE PROMISE
[CONTRACT-ID]	[Input / caller → interface → consumer]	[Result and how it is checked]
[CONTRACT-ID]	[State, event or artifact exchanged]	[Failure response / recovery promise]
[GUARD-ID]	[Permission or destructive boundary]	[Check that the boundary holds]

Use a named interface or observable contract for a midpoint. E2M and M2E are partial paths until their integrated E2E outcome is demonstrated.

REUSE WHAT IS ALREADY PROVEN

REUSE	Use a capability. Do not automatically adopt the source project's rules or assumptions.
INHERIT	Explicitly adopt a requirement or contract into project SPEC; identify its source and scope.
REFERENCE	Consult knowledge or evidence without adopting its normative authority.

ESSENTIAL IMPLEMENTATION REFERENCES

ITEM	INTENT / PURPOSE	SOURCE / OPTIONAL PIN
[Runtime / library]	[Use + reason + MUST/SHOULD/MAY]	[Canonical source / clause ID]
[Existing implementation]	[REUSE + scope of the capability]	[Repository / commit, if material]
[External contract]	[INHERIT only where explicitly adopted]	[Standard / version, if material]

Add a version, date or commit only where it changes the meaning. Keep transitive dependencies, large inventories and moving test matrices in referenced project files.

SCOPED PROOF

Claim: [what is being asserted]. Scope: [artifact + workflow]. Environment: [platform + relevant versions]. Evidence: [test, review or log]. Result: **NOT YET PROVEN** until checked.

Fixtures or stubs **MAY** support a declared partial check. They **MUST NOT** be presented as proof of a real integration they replace.

OPEN QUESTIONS & EXCEPTIONS

Unresolved intent	[Question + person responsible for deciding it]. Agents do not invent the missing rule.
Active exception	[Clause ID + scope + authority + reason + evidence + review/expiry]; otherwise state NONE.

A recorded exception does not silently change the original requirement. Conformance remains limited to the declared scope and authorized exception.

[PROJECT / PRODUCT]

Project repository: [owner/repository] • Owner: [responsible person/team]

RELEASE & EVIDENCE

A reviewed release view, not an iteration tracker. Keep full logs and implementation detail in project-local supporting files.

EXACT FOUR-SQUARE SNAPSHOT

Release: [project release ID] • Project repository: [owner/repository] • FSL template: v1.6

SQUARE	PROJECT-LOCAL BRANCH	REVIEWED COMMIT	GATE
SPEC	spec-vN	[Full reviewed commit ID]	[Gate evidence]
[LANE A]	[lane-a]-vN	[Full reviewed commit ID]	[Gate evidence]
[LANE B]	[lane-b]-vN	[Full reviewed commit ID]	[Gate evidence]
MEMORY	memory-vN	[Full reviewed commit ID]	[Gate evidence]

Integration: [full accepted commit ID]. Publication: [branch / tag / release URL and actual state]. A branch name alone is not an immutable snapshot.

LAW-SNAPSHOT-001 / 002: record the four reviewed commits; the snapshot does not replace Git. Do not invent a commit or claim publication from a local package.

SCOPED ACCEPTANCE EVIDENCE

CLAUSE	CLAIM / SCOPE	PROOF CONTEXT	RESULT
[CLAUSE-ID]	[Claim + artifact / path]	[Environment + evidence link]	<u>NOT YET PROVEN</u>
[CLAUSE-ID]	[Second material promise]	[Environment + evidence link]	<u>NOT YET PROVEN</u>

A changed component can pass its own gate without establishing the complete user path. Scope the statement to the proof actually obtained.

CONFORMANCE DECLARATION

<u>CONFORMANT</u>	Applicable binding requirements have evidence; no unresolved binding violation.
<u>CONFORMANT WITH EXCEPTION</u>	An authorized, explicit and scoped exception accompanies otherwise supported claims.
<u>NON-CONFORMANT</u>	A binding requirement is known to be violated.
<u>NOT YET PROVEN</u>	Evidence or a necessary interpretation is unresolved.

Declared state: **NOT YET PROVEN** • Reviewer / date: [owner / date] • Active exceptions: [NONE / IDs]

POST-RELEASE LIFECYCLE

Released SPEC stays immutable. APPENDIX clarifies/supports without changing intent; ERRATA corrects without changing intent; AMENDMENT changes intent and identifies the released version plus affected clauses.

Identity: APPENDIX-A / ERRATA-001 / AMENDMENT-001. The next release **SHOULD** absorb adopted errata/amendments. Release is immutable. Clarify with appendix, correct with errata, change with amendment.
