

DJANGO

ILLUSTRATIVE ADOPTION / reference: django/django

PURPOSE Illustrate adoption of an existing database-backed web application. [D1]
BOUNDARY Teaching only; not upstream Django policy, adoption, or tested behavior.

FOUR SQUARES

01 SPEC / spec-vN FSL / Scope / Contracts / Acceptance / Routes Optional: Appendix / Errata / Amendments	02 CODE / code-vN Product / Runtime / Data / API / UI / Build Gate: deliverable and product checks
03 DOCS / docs-vN Developer guidance / Examples Gate: aligned guidance	04 MEMORY / memory-vN Decisions / Rationale / Context / Evidence links Gate: reliable recall; no new law

SPEC + MEMORY fixed; SYSTEM + AI recommended. CODE / DOCS retained as this sample specialization.

BINDING CONTRACT

MUST / **MUST NOT** = binding / **SHOULD** / **SHOULD NOT** = guidance / **MAY** = permission

CLAUSE ID	REQUIREMENT / PROMISE	VERIFICATION
LAW-DJANGO-001	Public behavior MUST have scoped code evidence and aligned guidance.	Code + guidance
GUARD-DJANGO-002	DOCS MUST NOT claim behavior unsupported by accepted CODE.	Review
CONTRACT-DJANGO-004	Evidence MUST distinguish tested behavior from illustration.	Scoped evidence

E2E ROUTES / VISIBLE TOUCHPOINTS

R-01 request -> URL -> view -> model -> DB -> template -> HTML response

Expected: known article title in the returned HTML; browser/deployment excluded.
Every run shows every declared point: PASS / FAIL / NOT RUN + evidence. Listing points or passing a component test is not E2E proof.

ADOPTION / DEVELOPMENT STRATEGY

Existing: study -> reviewed adoption baseline -> verify R-01. Iterations optional; do not reconstruct history. Baseline and runtime evidence not supplied.

ESSENTIAL TECHNOLOGIES / REFERENCES

ITEM	INTENT / USE	SOURCE
Django facilities	SHOULD REUSE within this illustration	[D1] Overview
Django tests	REFERENCE for planned checks	[D2] Testing

LIFECYCLE / RELEASE CHECK

Draft -> Prove -> Release -> Maintain as needed -> Next release. Appendix explains; errata corrects; adopted amendment changes intent. Released SPEC stays frozen.

[] SPEC stable [] CODE verified [] DOCS aligned / scoped [] MEMORY understandable

Conformance: **NOT YET PROVEN**. Example only; no runtime run or release snapshot asserted.
main1 = original root. New lanes start there; existing adoption may start at a reviewed commit. Matching lane lineage continues; main = accepted integration.

DJANGO

ILLUSTRATIVE ADOPTION / reference: django/django

DJANGO / EXISTING-SYSTEM ILLUSTRATION

Sample edition v1.7 / reference baseline: Django 5.2 documentation. No actual upstream adoption or execution is asserted.

R-01 / ONE ARTICLE TO HTML

Illustrative route: a request retrieves one known stored article and returns its title in HTML. The request-to-response boundary excludes a browser, JavaScript, hosting and production deployment. [D1]

request -> URL -> view -> model -> DB -> template -> HTML response

EVERY RUN SEES THE TOUCHPOINTS

Run: NOT EXECUTED. Implementation/environment: not supplied. SPEC/route baseline: this illustrative sample only. No runtime evidence is attached.

TOUCHPOINT	PLANNED OBSERVATION	RESULT	EVIDENCE
Request	Known article request	NOT RUN	No runtime evidence
URL	Resolve expected view	NOT RUN	No runtime evidence
View	Handle known arguments	NOT RUN	No runtime evidence
Model	Select expected record	NOT RUN	No runtime evidence
Database	Read known stored title	NOT RUN	No runtime evidence
Template	Render the retrieved title	NOT RUN	No runtime evidence
HTML response	Assert title in output	NOT RUN	No runtime evidence

Expected outcome: known title in returned HTML. Observed outcome: not supplied. Route conformance: **NOT YET PROVEN**. Documentation and page-layout checks are not runtime proof.

PROSPECTIVE ADOPTION / NO INVENTED ITERATIONS

Study the existing repository and deployed behavior; choose an exact adoption baseline; distinguish observed behavior from intended promises. Retain the CODE / DOCS specialization if justified. No historical or future iteration plan is required.

AI is not an artificial runtime hop. An agent helping with this study would not prove the request path. A database fixture supports only its disclosed test scope, not a production integration.

OPTIONAL SPEC LIFECYCLE

Appendix may hold the current-state map. Errata can correct a recorded reference. A new post-release promise needs an explicitly adopted amendment tied to its baseline and clauses; the prior release stays frozen.

CANONICAL REFERENCES / NOT ADOPTED UPSTREAM LAW
